## Multi-Osc OB/OS Overlap Trader Manual

---

### 1. Parameters

#### 1.1. MFI

- "MFI: Period": The period of the Money Flow Index Oscillator (MFI Oscillator).
- "MFI: Threshold High": The threshold of the MFI Oscillator value that indicates overbought market conditions.
- "MFI: Threshold Low": The threshold of MFI Oscillator value that indicates oversold market conditions.

#### 1.2. RSI

- "RSI: Period": The period of the Relative Strength Index Oscillator (RSI Oscillator).
- "RSI: Smooth": The smooth coefficient in the formula for calculating RSI Oscillator.
- "RSI: Plot": Select the value to represents the RSI Oscillator: RSI value or Avg value.
- "RSI: Threshold High": The threshold of the RSI Oscillator value that indicates overbought market conditions.
- "RSI: Threshold Low": The threshold of RSI Oscillator value that indicates oversold market conditions.

#### 1.3. Stoch

- "Stoch: Period D": The period of the %D value of the Stochastic Oscillator (Stoch Oscillator).
- "Stoch: Period K": The period of the %K value of the Stochastic Oscillator (Stoch Oscillator).
- "Stoch: Smoothing Method": The method for Stoch Oscillator smoothing (can choose from 10 popular moving-average types).
- "Stoch: Smoothing Period": The period for Stoch Oscillator smoothing.

- "Stoch: Plot": Select the value to represents the Stoch Oscillator: %D value or %K value.
- "Stoch: Threshold High": The threshold of the Stoch Oscillator value that indicates overbought market conditions.
- "Stoch: Threshold Low": The threshold of Stoch Oscillator value that indicates oversold market conditions.

#### 1.4. Safe Reversal Period

The Reversal Index is determined for each Overlap area, starting from 1 when the Overlap area commences to end (indicated by a pink background or green area). The count resets for every new overlap area.

Once the Overlap area concludes, the algorithm begins monitoring the Reversal Bar. This bar represents a reversal compared to the previous bar. If the Reversal Bar appears and the Reversal Index is less than the Safe Reversal Period, a Reversal signal is triggered.

## 2. NinjaScripts Signals

You can rely on the Dedicated NinjaScript signals below to build your own strategy:

- **Signal\_Trade:** 1 = Bullish reversal, -1 = Bearish reversal
- **Signal\_Detection:** -1 = detection of overlap OB, 1 = detection of overlap OS, 0 = none
- **Signal\_State:** 1 = overlap OB, -1 = overlap OS, 0 = no overlap
- **Signal\_StateMFI:** 1 = overbought, -1 = oversold, 0 = middle
- **Signal\_StateRSI:** 1 = overbought, -1 = oversold, 0 = middle
- **Signal\_StateStoch:** 1 = overbought, -1 = oversold, 0 = middle

Below is the example condition based on the **Signal\_Trade**:

If Signal\_Trade equals to 1, you can enter long here.

If Signal\_Trade equals to -1, you can enter short here.
