

Cumulative Delta Trader Manual

1. Plots

1.1. Cumulative Delta

- "Cumulative Delta": Provide raw data of cumulative delta which is identical to NinjaTrader 8's Order Flow+ Cumulative Delta indicator.

1.2. Moving Median

- "Moving Median": The moving median of the cumulative delta.

1.3. Difference

- "Difference": The difference between cumulative delta and moving median.

2. Parameters

2.1. Volume Base

- "Volume Base": Can choose from BidAskPrice_RealVolume or UpDownTick_RealVolume or UpDownTick_UnitVolume.

Please follow the link below for more information about this:

<https://drive.google.com/file/d/1bRPF2oOBnLA4ru3ds4Ke0oQIfikmImLH/view?pli=1>

2.2. Threshold

- "Threshold: Positive Strong": The positive strong threshold of the difference.
- "Threshold: Negative Strong": The negative strong threshold of the difference.

If the values of the 2 thresholds above are small, the market will easily enter a trend (with more whipsaws) and vice versa.

2.3. Moving Median

- "Moving Median: Period": The period of the Moving Median.

2.4. Cumulative Delta Lookback (Bars)

- "Cumulative Delta Lookback (Bars)": The number of bars to monitor cumulative delta for trend shifts.

If its value is large, it will be difficult for the market to enter a trend, and vice versa if it is small, the market will easily enter a trend, and there are whipsaw signals on your chart.

3. NinjaScripts Signals

You can rely on the signals below to build your Bloodhound/Strategy.

- **Signal_Trend:** 2 = *uptrend strong*, 1 = *uptrend weak*, -2 = *downtrend strong*, -1 = *downtrend weak*, 0 = *neutral*
- **Signal_State:** 1 = *diff above positive threshold*, -1 = *diff below negative threshold*, 0 = *diff in between the thresholds*

Below is the example condition based on the **Signal_Trend**:

If Signal_Trend switches from another value to 2 (Signal_Trend at the current bar equal to 2 and Signal_Trend at 1 bar ago not equal to 2), you can enter long here.

If Signal_Trend switches from another value to -2 (Signal_Trend at the current bar equal to -2 and Signal_Trend at 1 bar ago not equal to -2), you can enter short here.
