
Easy Trend Trader Manual

1. Parameters

1.1. MA Type

- "MA Type": The moving average type (can choose from 11 popular moving-average types)

1.2. Period

- "Period": The period of the moving average.

1.3. Smoothing

- "Smoothing: Enabled": Enabled/Disable smoothing of the moving average.
- "Smoothing: Method": The method for smoothing (can choose from 11 popular moving-average types)
- "Smoothing: Period": The period for smoothing.

1.4. Filter

- "Filter: Enabled": Enabled/Disable filter.
- "Filter: After Smoothing": If enable this option, the filter will be applied after smoothing, else filter will be applied before smoothing
- "Filter: Multiplier": The coefficient for the filter.
- "Filter: Unit": The unit for the filter. You can choose from ninZaATR & Tick.
- "Filter: ninZaATR Period": The period of the ninZaATR if you choose Filter: Unit as ninZaATR (ninZaATR is our free indicator, for more information please follow this link: <https://ninza.co/product/ninzaatr>).

2. NinjaScripts Signals

You can rely on the signals below to build your own strategy:

- **Signal_State**: 1 = uptrend, -1 = downtrend

Below is the example condition for this indicator based on the **Signal_State**:

If Signal_State switches from another value to 1 (Signal_State at the current bar equal to 1 and Signal_State at 1 bar ago not equal to 1), you can enter long here.

Conversely, if Signal_State switches from another value to -1 (Signal_State at the current bar equal to -1 and Signal_State at 1 bar ago not equal to -1), you can enter short here.
